## Sample: Economics - Accounting for Fixed Assets

1. 

VC • Wages paid to temporary workers
FC • Property taxes on a factory building.
FC • Property taxes on an administrative building.
VC • Sales commission.
VC • Electricity for machinery and equipment in the plant.
FC $\bullet$ Heating and air-conditioning for the plant.
FC • Salaries paid to design engineers.
FC • Regular maintenance on machinery and equipment.
VC • Basic raw materials used in production.
FC • Factory fire insurance.
2. The maker of Winglow is purchasing a new stamping machine. Two options are being considered, Rooney and Blair. The sales forecast for Winglow is 8,000 units for next year. If purchased, the Rooney will increase plant fixed costs by $\$ 20,000$ and reduce variable costs by $\$ 5.60$ per unit. The Blair would increase fixed costs by $\$ 5,000$ and reduce variable costs by $\$ 4.00$ per unit. If variable costs are now $\$ 20$ per unit, which machine should be purchased?

## Answer:

TC = VC + FC
Rooney will reduce total costs by: $(-5.6)^{*} 8,000+20,000=-24,800 \$$;
Blair will reduce total costs by: $(-4)^{*} 8,000+5,000=-27,000$;
That's why we should purchase Blair, as it is more cost reducing.
3. The cost curve for producing widgets passes through the following points and is piecewise linear in between.

| Units Produced | 0 | 200 | 400 | 600 |
| :--- | :--- | :--- | :--- | :--- |
| Costs | $\$ 600$ | $\$ 1,200$ | $\$ 1,600$ | $\$ 1,800$ |

a. What is the fixed cost of producing 600 widgets?
b. What is the variable cost of producing 600 widgets?
c. What is the cost per unit if only 400 widgets are produced?
d. What is the incremental cost of producing the 100th widget?
e. What is the incremental cost of producing the 500th widget?
f. What is the fixed cost per unit for producing 1,000 widgets?
g. What is the variable cost per unit for producing 1,000 widgets?

Answer:
TC = FC + VC

| Units | 0 | 200 | 400 | 600 |
| :--- | :--- | :--- | :--- | :--- |
| Costs | 600 | 1,200 | 1,600 | 1,800 |
| VC | 0 | 600 | 1,000 | 1,200 |
| FC | 600 | 600 | 600 | 600 |

a. $\mathrm{FC}=\$ 600$
b. $\mathrm{VC}=\$ 1,200$
c. $\mathrm{ATC}=1,600 / 400=\$ 4$
d. $\mathrm{MC}=(1,200-600) /(200-0)=\$ 3$
e. $\mathrm{MC}=(1,800-1,600) /(600-400)=\$ 1$
f. $\mathrm{FC}=$ const, $\mathrm{AFC}=\mathrm{FC} / \mathrm{Q}=600 / 1,000=\$ 0.6$
g. If we suppose, that $\mathrm{VC}=1350, \mathrm{AVC}=\mathrm{VC} / \mathrm{Q}=1,350 / 1,000=\$ 1.35$
4. Product X is sold for $\$ 500$ per unit. The total cost of production per year, including capital recovery and a return, is given by the expression
$\mathrm{TC}=0.04 \mathrm{n}^{3}-700 \mathrm{n}+50,000$
where n is the number of units sold. If TC represents the total of all fixed and variable costs, determine the following:
a. The value of $n$ that maximizes profit
b. The maximum profit for a year
c. The fixed cost per year

## Answer:

a. We maximize profit, if $M R=M C, M R=\Delta T R / \Delta Q=P, \Delta T C / \Delta Q$, profit is $T P=T R$ - TC. As we calculated (see the excel sheet), MR = MC between 100 and 101 unit, when $\mathrm{n}=100, \mathrm{TP}=\$ 30,000$ is max.
b. $\mathrm{TP}=\$ 30,000$
c. $\mathrm{FC}=50,000$ as the constant number of the TC equation.
5. For each of the following assets, state whether the asset is tangible/ intangible property, personal/ real property, and depreciable/ nondepreciable property.
a. A melt- indexer used in a company research lab
b. A computer used for personal e-mail, blogging, and hobbies
c. A plot of land for the production of income
d. A file cabinet in your business office
e. A restaurant franchise
f. A commercial delivery truck
g. An amateur radio tower attached to land with multiple antennas on it
h. An office complex for business
i. Fencing and landscaping around an office complex

## Answer:

a. Tangible, personal, non-depreciable.
b. Tangible, personal, depreciable.
c. Tangible, real, non-depreciable.
d. Tangible, real, non-depreciable.
e. Tangible, real, non-depreciable.
f. Tangible, personal, depreciable.
g. Tangible, personal, depreciable.
h. Tangible, real, non-depreciable.
i. Tangible, real, non-depreciable.
6. A surface mount PCB placement/ soldering line is to be installed for $\$ 1.6$ million. It will have a salvage value of $\$ 100,000$ after 5 years. Determine the depreciation deduction and the resulting unrecovered investment during each year of the asset's life.
a. Use straight- line depreciation
b. Use declining- balance depreciation, with a rate that ensures the book value equals the salvage value
c. Use double declining balance depreciation
d. Use double declining balance, switching to straight- line depreciation

## Answer:

a.

## Annual Depreciation Expense $=\frac{\text { Cost of Fixed Asset }- \text { Residual Value }}{}$ Useful Life of Asset(years)

| Book value at <br> beginning of year | Depreciation <br> expense | Accumulated <br> depreciation | Book value at <br> end of year |
| :---: | :---: | :---: | :---: |
| $\$ 1,600,000$ <br> (original cost) | $\$ 300,000$ | $\$ 300,000$ | $\$ 1,300,000$ |
| $\$ 1,300,000$ | $\$ 300,000$ | $\$ 600,000$ | $\$ 1,000,000$ |
| $\$ 1,000,000$ | $\$ 300,000$ | $\$ 900,000$ | $\$ 700,000$ |
| $\$ 700,000$ | $\$ 300,000$ | $\$ 1,200,000$ | $\$ 400,000$ |
| $\$ 400,000$ | $\$ 300,000$ | $\$ 1,500,000$ | $\$ 100,000$ (salvage <br> value) |

b. Annual Depreciation $=$ Depreciation Rate $*$ Book Value at Beginning of Year
depreciation rate $=1-\sqrt[N]{\frac{\text { residual value }}{\text { cost of fixed asset }}}$

| Book value at <br> beginning of <br> year | Depreciation <br> rate | Depreciation <br> expense | Accumulated <br> depreciation | Book value <br> at <br> end of year |
| :---: | :---: | :---: | :---: | :---: |
| $\mathbf{1 , 6 0 0 , 0 0 0}$ | $42,56503 \%$ | 681,040 | 681,040 | 918,960 |
| 918,960 | $42,56503 \%$ | 391,155 | $1,072,196$ | 527,804 |
| 527,804 | $42,56503 \%$ | 224,660 | $1,296,856$ | 303,144 |
| 303,144 | $42,56503 \%$ | 129,033 | $1,425,889$ | 174,111 |
| 174,111 | $42,56503 \%$ | $74,110.3$ | $1,500,000$ | $\mathbf{1 0 0 , 0 0 0}$ |
|  |  |  |  |  |

c.

| Book value at <br> beginning of <br> year | Depreciation <br> rate | Depreciation <br> expense | Accumulated <br> depreciation | Book value <br> at <br> end of year |
| :---: | :---: | :---: | :---: | :---: |
| $\$ \mathbf{1 , 6 0 0 , 0 0 0}$ <br> (original cost) | $40 \%$ | $\$ 640,000$ | $\$ 640,000$ | $\$ 960,000$ |
| $\$ 960,000$ | $40 \%$ | $\$ 384,000$ | $\$ 1,024,000$ | $\$ 576,000$ |
| $\$ 576,000$ | $40 \%$ | $\$ 230,400$ | $\$ 1,254,400$ | $\$ 345,600$ |
| $\$ 345,600$ | $40 \%$ | $\$ 138,240$ | $\$ 1,392,640$ | $\$ 207,360$ |
| $\$ 207,360$ | $\$ 207,360-\$ 100$ | $\$ 107,360$ | $\$ 1,500,000$ | $\$ 100,000$ <br> (salvage <br> value) |

d.

| Book <br> value at <br> beginning <br> of year | Depreciati <br> on <br> expense <br> (straight- <br> line) | Depreciati <br> on <br> rate | Depreciati <br> on <br> expense | Depreciati <br> on expense <br> (final) | Accumulat <br> ed <br> depreciatio <br> n | Book <br> value at <br> end of <br> year |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $\$ \mathbf{1 , 6 0 0 , 0 0}$ <br> 0 <br> (original <br> cost) | $\$ 300,000$ | $40 \%$ | $\$ 640,000$ | $\$ 640,000$ | $\$ 640,000$ | $\$ 960,00$ <br> 0 |
| $\$ 960,000$ | $\$ 215,000$ | $40 \%$ | $\$ 384,000$ | $\$ 384,000$ | $\$ 1,024,000$ | $\$ 576,00$ <br> 0 |
| $\$ 576,000$ | $\$ 158,667$ | $40 \%$ | $\$ 230,400$ | 300 | $\$ 1,254,400$ | $\$ 345,60$ <br> 0 |
| $\$ 345,600$ | $\$ 81,867$ | $40 \%$ | $\$ 138,240$ | 300 | $\$ 1,392,640$ | $\$ 207,36$ <br> 0 |
| $\$ 207,360$ | $\$ 107,36$ | $40 \%$ | $\$ 82,944$ | 300 | $\$ 1,500,000$ | $\$ \mathbf{1 0 0 , 0 0}$ <br> $\mathbf{0}$ |
|  |  |  |  |  |  | (salvag <br> evalue) |

7. A robotic precision spot welder is purchased for $\$ 380,000$. The installation cost is $\$$ 45,000 , which will be expensed. It will have a useful life of 24,000 hours of operation, after which it will have a salvage value of $\$ 60,000$. It takes 6 minutes to weld a part, and approximately 24,000 units are expected to be welded in the first year, increasing by 24,000 units each year thereafter.
a. What is the cost basis?
b. What is the salvage value?
c. How many years of useful life are expected?
d. What is the depreciation each year, using the unit of production method of depreciation?

## Answer:

a. Cost basis is $\$ 320,000$
b. Salvage value is $\$ 60,000$
c. Total units quantity $=24,000 * 60 / 6=240,000, \mathrm{~N}=4$ years $(24,000+$ $24,000 * 2+24,000 * 3+24,000 * 4=240,000)$
d.

Annual Depreciation Expense $=\frac{\text { Cost of Fixed Asset }- \text { Residual Value }}{\text { Estimated Total Production }} \times$ Actual Production
Depreciation $=(380,000-60,000) / 240,000=\$ 1.33$ per unit.

| Book value <br> at <br> beginning <br> of year | Units | Depreciation <br> cost per unit | Depreciation <br> expense | Accumulated <br> depreciation | Book <br> value at <br> end of <br> year |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $\$ \mathbf{3 8 0 , 0 0 0}$ | 24,000 | $\$ 1.33$ | $\$ 31,920$ | $\$ 31,920$ | $\$ 348,080$ |
| $\$ 348,080$ | 48,000 | $\$ 1.33$ | $\$ 63,840$ | $\$ 95,760$ | $\$ 284,240$ |
| $\$ 284,240$ | 72,000 | $\$ 1.33$ | $\$ 95,760$ | $\$ 191,520$ | $\$ 188,480$ |
| $\$ 188,480$ | 96,000 | $\$ 1.33$ | $\$ 128,480$ | $\$ 320,000$ | $\$ \mathbf{6 0 , 0 0 0}$ |

8. An X- ray machine at a dental office is MACRS 5- year property. It costs $\$ 6,000$ and has an expected useful life of 8 years. The salvage value at the end of 8 years is expected to be $\$ 500$. Assuming MACRS depreciation, what is the book value at the end of the third year?

Answer:

| Book value <br> at <br> beginning of <br> year | $\%$ | Depreciation <br> expense | Accumulated <br> depreciation | Book <br> value at <br> end of <br> year |
| :---: | :---: | :---: | :---: | :---: |
| $\mathbf{6 , 0 0 0}$ | $14.29 \%$ | $\$ 857.4$ | $\$ 857.4$ | $\$ 5,142.6$ |
| $\$ 5,142.6$ | $24.49 \%$ | $\$ 1,259.42$ | $\$ 2,116.82$ | $\$ 2,623.76$ |
| $\$ 2,623.76$ | $17.49 \%$ | $\$ 458.9$ | $\$ 2,575.72$ | $\$ 2,164.86$ |

At the end of the third year we have $17.49 \%$ level of depreciation, so the book value will be $\$ 2,164.86$.
