

## **Answer on the question #59945, Chemistry / Physical Chemistry**

### **Question :**

Distillation can be use to separate?

- A)a soluble solid from a solution
- B)a liquid from a solution
- C)a Solid from a solid
- D)an insoluble solid from a solution

### **Answer :**

Distillation can be used to separate a liquid from solution, B) and a soluble solid from a solution, A). The first performed by selective evaporation and condensation (fractional distillation), the latter is simple distillation : evaporation of solvent from the solution.
