

Answer on Question #62804, Chemistry / General Chemistry

Calc the PH and POH of a solution that's .39M in HNO₂ and .14M in Ca(NO₂)₂.K_i for HNO₂=5.1x10⁻⁴

Solution:

$$0.39 + 2(0.14) = 0.67 \text{ M}$$

$$K = K_w/K_a = 1.96 \times 10^{-11}$$

$$[\text{OH}^-] = \sqrt{(K_w/K_a)[\text{NO}_2^-]} = \sqrt{(1.96 \times 10^{-11} \times 0.67)} = 3.62 \times 10^{-6}$$

$$[\text{OH}^-] = 3.62 \times 10^{-6} \text{ M}$$

$$\text{pOH} = -\log[\text{OH}^-]$$

$$\text{pOH} = 5.44$$

$$\text{pH} + \text{pOH} = 14$$

$$\text{pH} = 8.56$$

Answer: pOH = 5.44; pH = 8.56
