

Answer on Question #77151, Chemistry / General Chemistry

Question:

Why is a buret used for many titrations?

Answer:

Buret (or burette) is laboratory equipment which allows dispensing some amount of liquid (or solution) and measuring added volume. It is a long tube with graduation and a stopcock with thin nozzle at the bottom. This design was specially invented for titration processes where a reagent should be added dropwise and it is important to know its exact amount.
