

Answer on Question #79932 - Chemistry - Physical Chemistry

Question:

Solution of 0.1g KIO_3 has been used to cure any of the symptoms of HCL, but it is possible to treat the thiosalphate varies from 45.0 ml to the same level, so that the thososalphate is available

Solution:

To treat any symptoms of CHL, you can certainly use Berthoeth salt, but compared to the amount of thiosulphate (if you count it for mass), Berthollet salt is needed more, Cheshiosulphate. On a larger scale, it is more economical to use thiosulfate, since this reagent is less expensive.
