Question

Calculate 12.6 divided by 3

Solution

We can present 12.6 as

$$12 + \frac{6}{10}.$$

12 divided by 3 is 4.

6 divided by 3 is 2.

So,

$$\frac{12.6}{3} = \frac{12 + \frac{6}{10}}{3} = 4 + \frac{2}{10} = 4.2$$

Answer: 4.2.
