## Answer on Question \#63335 - Math - Calculus

## Question

A manufacturer of furniture has determined that the weekly production function for $p$ thousand furniture is

$$
p=1000+\left.20\right|^{\wedge} 2 k^{\wedge} 3-\left.5\right|^{\wedge} 3-3 k^{\wedge} 4
$$

where $I$ is the number of labor hours per week in thousands and $k$ is the amount of capital in thousands of RM per week. Determine:
i) the marginal production function with respect to I
ii) the marginal production function with respect to k

## Solution

Marginal production function is the first derivative of production function.
i) So, the marginal production function with respect to $l$ is

$$
M P_{l}=\frac{\partial}{\partial l}\left(1000+20 l^{2} k^{3}-5 l^{3}-3 k^{4}\right)=40 l k^{3}-15 l^{2}
$$

ii) The marginal production function with respect to $k$ is

$$
M P_{k}=\frac{\partial}{\partial k}\left(1000+20 l^{2} k^{3}-5 l^{3}-3 k^{4}\right)=60 l^{2} k^{2}-12 k^{3}
$$

Answer: i) $40 l k^{3}-15 l^{2}$; ii) $60 l^{2} k^{2}-12 k^{3}$.
