Answer on Question #74052 – Math – Calculus

Question

Trace the curve $x(y^2 + 4) = 8$, stating all the points used for doing so.

Solution

1. Symmetry $x(y^2 + 4) = 8$ All powers of y in the equation are even. $x((-y)^2 + 4) = x(y^2 + 4)$ Therefore, curve is symmetrical about x- axis. Curve is not symmetrical about y- axis. Curve is not symmetrical about the line y = x. Curve is not symmetrical about the line y = -x. Curve is not symmetrical in opposite quadrants.

2. Origin $x(y^2 + 4) = 8$ $(0,0): 0((0)^2 + 4) = 8$ 4 = 8, False A curve does not pass through the origin.

3. Intercepts $x(y^2 + 4) = 8$ Intersection with *x*- axis: Put y = 0 in the equation of the curve and solve the resulting equation x(0 + 4) = 8 => x = 2Intersection with *x*- axis: *Point* (2,0)

Intersection with y- axis: Put x = 0 in the equation of the curve and solve the resulting equation $0(y^2 + 4) = 8 => No \ solutions.$ There is no intersection with y- axis.

Tangent to the curve

In order to find the tangent(s) at the point (2, 0), we should shift the origin to (2, 0) and then the tangent(s) at this new origin will be obtained by equating to zero the lowest degree term.

Tangent at the point (2,0):

x = 2

4. Asymptotes $x(y^2 + 4) = 8$ Asymptote(s) parallel to *y*- axis Equal to zero the coefficient of the highest degree terms in *y* x = 0 Vertical asymptote

Asymptote(s) parallel to x- axis Equal to zero the coefficient of the highest degree terms in x $y^2 + 4 = 0$ No solution There is no horizontal asymptote.

Oblique asymptote(s) There is no oblique asymptote.

5. Regions where no Part of the curve lies $x(y^2 + 4) = 8$ Since $y^2 + 4 > 0$, we have x > 0 $y^2 + 4 = \frac{8}{x}$ Since $y^2 + 4 \ge 4, x > 0$, we $x \le 2$, Therefore, $0 < x \le 2, y \in R$. When $x \to 0^+, y \to \pm \infty$

6. First derivative $x(y^2 + 4) = 8$ Differentiate both sides with respect to *x* and use the Chain rule

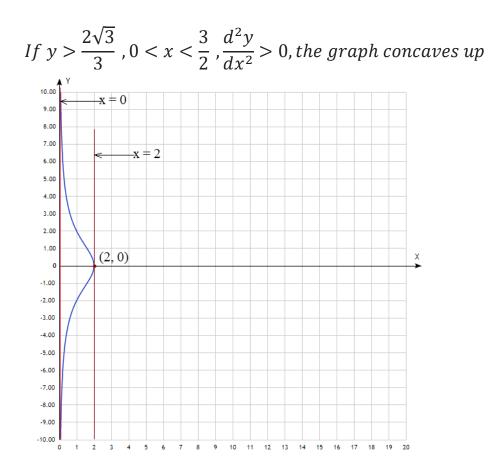

$$y^{2} + 4 + x(2y)\frac{dy}{dx} = 0$$
$$\frac{dy}{dx} = -\frac{y^{2} + 4}{2xy}$$
$$\frac{dy}{dx} = -\frac{\frac{8}{x}}{2xy}$$
$$\frac{dy}{dx} = -\frac{4}{x^{2}y}$$
eases

If
$$y > 0$$
, $\frac{dy}{dx} < 0$, y decreases
If $y < 0$, $\frac{dy}{dx} > 0$, y increases
If $x \to 2^{-}$, $\frac{dy}{dx} \to \pm \infty$

The tangent at the point (2,0) is the straight line parallel to the y –axis.

7. Second derivative

$$\begin{aligned} x(y^{2} + 4) &= 8 \\ \frac{dy}{dx} &= -\frac{4}{x^{2}y} \\ \text{Differentiate both sides with respect to x and use the Chain rule} \\ \frac{d^{2}y}{dx^{2}} &= 4 \frac{2xy + x^{2}\left(-\frac{4}{x^{2}y}\right)}{x^{4}y^{2}} \\ \frac{d^{2}y}{dx^{2}} &= 4 \frac{2xy + x^{2}\left(-\frac{4}{x^{2}y}\right)}{x^{4}y^{2}} \\ \frac{d^{2}y}{dx^{2}} &= 4 \frac{2xy - \frac{4}{y}}{x^{4}y^{2}} \\ \frac{d^{2}y}{dx^{2}} &= 8 \frac{xy^{2} - 2}{x^{4}y^{3}} \\ \frac{d^{2}y}{dx^{2}} &= 8 \frac{xy^{2} - 2}{x^{4}y^{3}} \\ \frac{d^{2}y}{dx^{2}} &= 0 \Rightarrow 8 \frac{xy^{2} - 2}{x^{4}y^{3}} \\ \frac{d^{2}y}{dx^{2}} &= 0 \Rightarrow 8 \frac{xy^{2} - 2}{x^{4}y^{3}} \\ \frac{d^{2}y}{dx^{2}} &= 0 \Rightarrow 8 \frac{xy^{2} - 2}{x^{4}y^{3}} \\ \frac{d^{2}y}{dx^{2}} &= 0 \Rightarrow 8 \frac{xy^{2} - 2}{x^{4}y^{3}} \\ \frac{d^{2}y}{dx^{2}} &= 0 \Rightarrow 8 \frac{xy^{2} - 2}{x^{4}y^{3}} \\ \frac{d^{2}y}{dx^{2}} &= 0 \Rightarrow 8 \frac{xy^{2} - 2}{x^{4}y^{3}} \\ \frac{d^{2}y}{dx^{2}} &= 0 \Rightarrow 8 \frac{xy^{2} - 2}{x^{4}y^{3}} \\ \frac{d^{2}y}{dx^{2}} &= 0 \Rightarrow 8 \frac{xy^{2} - 2}{x^{4}y^{3}} \\ \frac{d^{2}y}{dx^{2}} &= 0 \Rightarrow 8 \frac{xy^{2} - 2}{x^{4}y^{3}} \\ \frac{d^{2}y}{dx^{2}} &= 0 \Rightarrow 8 \frac{xy^{2} - 2}{x^{4}y^{3}} \\ \frac{d^{2}y}{dx^{2}} &= 0 \Rightarrow 8 \frac{xy^{2} - 2}{x^{4}y^{3}} \\ \frac{d^{2}y}{dx^{2}} &= 0 \Rightarrow 8 \frac{xy^{2} - 2}{x^{4}y^{3}} \\ \frac{d^{2}y}{dx^{2}} &= 0 \Rightarrow 8 \frac{xy^{2} - 2}{x^{4}y^{3}} \\ \frac{d^{2}y}{dx^{2}} &= 0 \Rightarrow 8 \frac{x^{2}}{x^{4}y^{3}} \\ \frac{d^{2}y}{dx^{2}} &= 0 \Rightarrow 8 \frac{x^{2}}{x^{4}y^{3}} \\ \frac{d^{2}y}{dx^{2}} &= 0 \Rightarrow 8 \frac{x^{2}}{dx^{2}} \\ \frac{d^{2}y}{dx^{2}} \\ \frac{d^{2}y}{d$$
