

Answer on Question #75575 – Math – Algebra

Question

What is 5 plus 3?

Solution

So, the “plus” word, denoted as “+” sign, is an operator which is used for “Addition” operation. This operation contains three elements:

$$\textit{Term} + \textit{Term} = \textit{Sum}$$

Terms are also called **addends** or **summands**. In our example, first term is “5”, second term is “3” and, together, they form an “8” sum. So, “*addition*” means that we combine two group of elements together, into one, bigger group.

So the straightforward solution would look like this:

$$5 + 3 = 8$$

Let’s visualize this example. We will use apples for this:

(5 apples, first group)

+

(3 apples, second group)

=

(8 apples, one, bigger group)!
