## Answer on Question \#78402 - Math - Statistics and Probability

## QUESTION

A shipment of 5 computers contains 2 that are slightly defective, is a retailer receives three of there computers at random, list the element be the elements of the sample space 5 using the letter D and N for defective and none defective computers respectively. to each sample point assign a value of $X$ of the random variable X representing which is slightly defective?

## SOLUTION

3N, OD:
$X=0$

$$
\mathbf{P}(3 \mathrm{~N}, 0 \mathrm{D})=C_{K}^{k} \cdot \mathbf{C}_{\mathrm{N}-\mathrm{K}}^{\mathrm{n}-\mathrm{k}} / \mathrm{C}_{\mathrm{N}}^{\mathrm{n}}=C_{3}^{3} \cdot \mathbf{C}_{2}^{0} / \mathrm{C}_{5}^{3}=1 \cdot 1 / 10=0.1
$$

2N, 1D:
$X=1$

$$
\mathbf{P}(\mathbf{2 N}, \mathbf{1 D})=C_{K}^{k} \cdot \mathbf{C}_{\mathrm{N}-\mathrm{K}}^{\mathrm{n}-\mathrm{k}} / \mathrm{C}_{\mathrm{N}}^{\mathrm{n}}=C_{3}^{2} \cdot \mathbf{C}_{2}^{1} / \mathbf{C}_{5}^{3}=3 \cdot 2 / 10=0.6
$$

1N, 2D:
$X=2$

$$
\begin{gathered}
\mathbf{P}(1 \mathbf{N}, 2 \mathrm{D})=C_{K}^{k} \cdot \mathrm{C}_{\mathrm{N}-\mathrm{K}}^{\mathrm{n}-\mathrm{k}} / \mathrm{C}_{\mathrm{N}}^{\mathrm{n}}=C_{3}^{1} \cdot \mathrm{C}_{2}^{2} / \mathrm{C}_{5}^{3}=3 \cdot 1 / 10=0.3 \\
C_{K}^{k}=\frac{\boldsymbol{K}!}{k!(K-k)!}
\end{gathered}
$$
