

## Answer on Question #61915, Programming & Computer Science / Python

### Question:

Write a function called `manipulate_data` which will act as follows:

When given a list of integers, return a list, where the first element is the count of positives numbers and the second element is the sum of negative numbers.

NB: Treat 0 as positive.

### Solution:

```
def manipulate_data(values):  
    ret = [0, 0]  
    for val in values:  
        if val < 0:  
            ret[1] += val  
        else:  
            ret[0] += 1  
    return ret
```
